

The Height of Healthy Design®

## MultiTable Electric L-Shaped Standing Desk

## ASSEMBLY AND OPERATION

**PLEASE REVIEW** these instructions before beginning the assembly procedures. Check that all the parts shown below were provided with your order. Contact your supplier if any materials are missing. Do not discard the packaging until satisfied that the product operates to your satisfaction.

### PARTS AND TOOLS PROVIDED

<div>Leg Hinged to Frame (2)</div> <div></div>	<div>Center Leg (1)</div> <div></div>	<div>Adjustable Feet (2)</div> <div></div>
		<div>Center Leg Top Support (2)</div> <div></div>
<div>Side Leg Top Support (2)</div> <div></div>	<div>Cross Channel (2)</div> <div></div>	<div>Control Unit Bracket (1)</div> <div></div>
<div>Control Unit (1)</div> <div></div>	<div>Digital Keypad (1)</div> <div></div>	<div>Power Cable (1)</div> <div></div>
		<div>Cable Clip (4)</div> <div></div>
<div>Table Top Bracket (2)</div> <div></div>	<div>Fasteners</div> <div></div> <div>M10x45 (8)   M6x15 (14)   #10 x 5/8" (26)   M4x23 (2)</div>	
	<div>Allen Keys (1 each))</div> <div></div> <div>3mm   4mm   5mm</div>	

**NOTE:** This install requires a power tool or cordless drill. Except for the hex head screws, which is **not** a hand tool install.

### ADDITIONAL TOOLS REQUIRED

- #2 Phillips drill bit
- Power Driver

**CAUTION:** Always check that screws used to attach components to the work surface are not too long for the thickness of the surface.

**STEP 1**

With the table tops facing down on a soft, clean surface, arrange the leg columns and center leg top supports as shown.

- Unfold the hinged side legs and place them motor-side down at the ends of the work surface.
- Place the center leg motor side down near the 90° angle of the table.
- The mounting tabs on the leg columns and top supports must be face down so that they are against the work surface.
- Do not attach the small table top to the x-large table top nor the left leg to the center leg until the unit is placed in the upright position.

**STEP 2**

Lock the side leg columns in the upright position.

- Use the 4mm Allen key to install M6x15 hex head screws into the frame and motor.

**STEP 3**

Route the side column motor cables under the notch on the angled portion of each frame.

**STEP 4**

Install the cross channel on x=large top side.

- Insert the cross channel into the frame and center leg top support.
  - The cross channel fits into the rear opening on the frame, under the set screws.
- Slide the top supports under the center leg brackets. Align the holes on the top supports with the 90° holes in the brackets. See the illustration below.
- Position the cross channel so that its center line is centered between the frame and the top support.
- The MAX lines must not extend beyond the frame and top support.

**STEP 5**

Attach the top supports to the center leg brackets.

- Use the 4mm Allen key and four M6x15 hex head screws.
- Use the inner hole on the bracket for 90° tables and the outer hole for 120° tables.

## STEP 6

Attach the two-piece side top supports. One piece is attached to the frame; the other piece is separate.

- Insert the separate piece of the top support into the top support attached to the frame.
- Align the holes on the inserted piece with the rear set of two holes on the integral top support if the table depth is less than 30" (76cm). Align the holes with the front set if the table depth is 30" or more.

## STEP 7

Change the length of the adjustable feet.

- The length of the feet may be either 22" (55.9cm) or 28" (71.2cm). The feet are shipped in the 28" length. They should be changed to the shorter length to avoid protruding out from table edge.
- To change the length to 22":
  - Remove the two plastic Phillips screws holding the adjustment plate in place.
  - Use the 5mm Allen key to remove the four hex head screws.
  - Use the 3mm Allen key to loosen the two set screws.
  - Slide the feet to the 22" length. Reinstall the four hex head screws and tighten the set screws.
- Store unused adjustment plates in the brackets attached to the frame, securing them with the two plastic Phillips screws.

**STEP 8**

Attach a foot to each of the legs.

- Use four M10x45 screws per foot.
- Tighten the screws with an 5mm Allen key.

**STEP 9**

Adjust the position of the frame to align with the pre-drilled holes before attaching the x-large table top.

## STEP 10

Once the frame is in its final position, attach it to the work surface using the #10 x 5/8" screws (16 total).

- Attach the screws through the mounting tabs on the frame, center leg column, and center leg top supports, as well as the holes at the ends of the side column top supports.
- Use a power drill with #2 Phillips bit. This is not a hand tool install.
- After attaching the frame, tighten all 12 set screws, as shown below.

**\*NOTE: Do not attach the return side (small table top) to the main x-large top until unit is flipped right side up.**

## STEP 11

Attach the control unit bracket to one of the center leg top supports.

- Secure the control unit bracket to the frame using two M6x15 screws and the 4mm Allen key.
- The bracket may be attached on either side of the center column. (Note that the digital keypad will be attached on the same side.)

**STEP 12**

Attach the control unit to the work surface.

- Slide the control unit under the bracket and attach it using M5x18 wood screws. The motor cable and keypad ports should face away from the center column.
- Allow at least 2¼" (57mm) between the back of the control unit and the center column assembly to allow room for power cord attachment.

**STEP 13**

Attach the digital keypad flush with the front edge of the work surface.

- Use the two M4x23 wood screws.
- Attach the keypad on the same side as the control unit.

**STEP 14**

Make connections to the control unit.

- Connect the cable from the digital keypad.
- Connect the motor cables from the two motors underneath the x-large table top.
- Connect the power cord to the control unit.

**CAUTION:** Do not operate the table until after "zero setting" the system. See the following step.

## ASSEMBLY

### STEP 15

Flip desk upright and attach return side.

- Flip the assembled sections right side up and align the two table tops.
- The table top brackets should align with pre-drilled holes on underside of tops.
- Install the cross channel on small return top side.
- Insert the remaining cross channel into the frame and center leg top support.
- See the illustration below.
- Position the cross channel so that its center line is centered between the frame and the top support.
- Slide the return side support leg toward center leg support until table tops align.

### STEP 16

Attach two table tops together.

- The table top brackets should align with pre-drilled holes on underside of tops.
- Attach both Table Tops together with the table top brackets and the 8 #10 x 5/8" screws.
- Tighten the 6 set screws remaining on the cross channel.

**STEP 17**

"Zero set" the system before testing operation.

- Press and hold the UP ▲ and DOWN ▼ buttons at the same time. Continue to hold the buttons. The legs will retract until they reach their bottom point.
- Release the buttons once the system beeps. If it does not beep, continue to hold the buttons for 3 seconds after the legs reach the lowest point. The system is now "zero set."
- Press the UP ▲ or DOWN ▼ buttons to test operation. End your test with the legs lowered and unplug the power cord.
- If there are problems with operation, check that all cable and cord connections are secure. If problems continue, call MultiTable Customer Service at 602-773-6911.

**STEP 18**

Use the pre-installed cable clips plus the additional clips provided, to secure the cables in position.

- Cables must not interfere with table operation.
- Cables must not interfere with the user.

**STEP 19**

With the assistance of a helper, place the L-shaped desk in its final position.

**IMPORTANT:** There must be 1" (25mm) of clearance on all sides of the work surface (and other moving parts) to ensure free, unobstructed movement.

- Adjust the leveling glides on the feet to level the work surface, if necessary.
- Plug the power cord into an AC outlet.
- See the following page for operating procedures.

**CAUTION:** The “zero setting” procedure must be completed before operating the table. See Step 15 on page 9.

### **GENERAL OPERATION**

Move the table up or down by pressing UP ▲ or DOWN ▼ until the work surface reaches the desired height.

The table will continue to move up or down until you release the button or until the maximum or minimum height is reached.

**IMPORTANT:** Be sure there are no obstructions to table movement along its full range of travel.

### **SETTING A MEMORY POSITION**

The memory buttons allow you to save up to four specific positions of the work surface. To set a memory position:

- Adjust the work surface to the position you want to save. (The display on the control pad shows the work surface height.)
- Press the UP ▲ button and one of the memory buttons at the same time for 3 to 5 seconds.
- The display will flash “P” and the number of the memory button.
- Repeat for the other memory buttons, if desired.

### **MOVING TO A MEMORY POSITION**

- Press and hold the desired memory button.
- The work surface will move to the preset position.

**Table movement stops when you release the UP ▲ or DOWN ▼ button.**

**Example:** Press the UP ▲ button and memory button number 3 at the same time for 3 to 5 seconds. The display will flash “P3” indicating that the current table position has been saved in memory.

**Continue to press the memory button until table movement stops.**
